

## **MAP ASSIGNMENT**

### **Group No. 9**

#### **Group Members :**

1. **Atharva Kasangottuwar**
2. **Swaroop Prajapati**
3. **Ashish Prasad**
4. **Yash Kothari**

#### **Problem Definition :**

In our daily life, security plays a vital role, be it during a field work or an online work. In order to improve the security and usability of a user, we have devised a methodology which will enable the user to manage his desktop or laptop remotely. In simple , our application is works on a module which is used to manage remotely.

The key features which will be accessible to the user :

1. System features
2. Utility features

#### **A) System features :**

Allowing the user to do system oriented activities on his/her computer remotely. No matter where the user is, he/she can handle his system irrespective of their location.

1. Shutdown
2. Sleep
3. Restart
4. Lock

#### **B) Utility features :**

Ever wished to search something remotely?

The user can search any query or browse any website on his desktop with the help of our application.

1. Query search
2. URL Browse

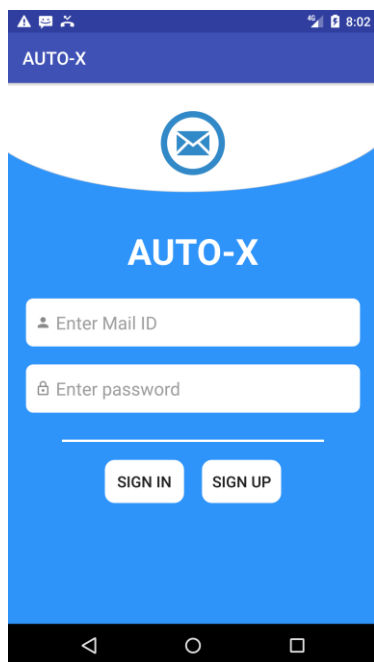

Now, with help of our tool, visit any site of your choice remotely while taking the presentation via the laptop.

#### **Other features :**

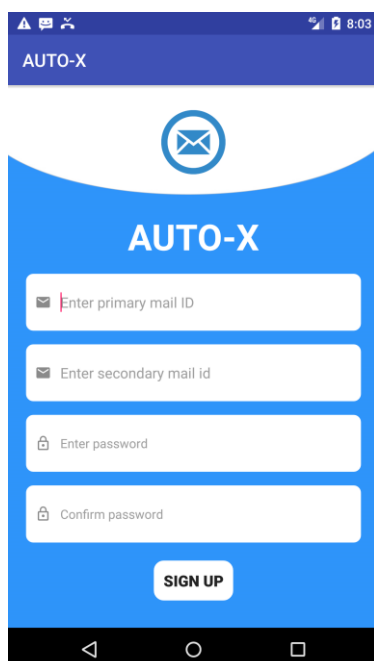

1. Make an account and preserve your information with our dynamic database.
2. Someone has a hint of what's your password ? No worries, we let you manage your password.
3. Get notified over your mail of the status of your command.
4. Intuitive GUI for better user experience.

## Our Functionalities
